

# INTRODUCING EIZO

At the cutting edge of display technology

Discover the full range inside

# Where quality is clear

Since the 1960s EIZO has manufactured high-quality monitors that deliver consistently clear images throughout the entire product lifecycle. It's not hard to see why EIZO monitors are popular the world over.

With a name that means 'image' in Japanese, EIZO takes pride in its solid reputation for delivering stable images across its range of small format displays.

Combining premium Japanese components with a five year warranty as standard, the performance of an EIZO screen will never disappoint.

Plus, with a commitment to ongoing product development, you can trust that EIZO's products will be at the cutting edge of display technology.

With FlexScan, ColorEdge and RadiForce products in stock, you could be in possession of EIZO monitors quicker than you think. Your account manager can help you find the right products for your customers today – just give them a call.

## EIZO FLEXSCAN

As the entry level display offered by EIZO, FlexScan monitors are ideal for a wide variety of applications, from office work to gaming and CAD.

[EXPLORE THE FLEXSCAN RANGE HERE](#)

Ergonomically designed for comfortable use, EIZO's FlexScan displays have adjustable stands and can show clear imagery at multiple angles. They also feature flicker-free displays, helping to reduce eye-strain even if they are being looked at for long periods.

Plus, with attractive flat, bezel-free models available, users can focus on what's on the screen, rather than around it.

As with all EIZO products, environmental considerations have been made when developing FlexScan screens.

With LED backlights that use less energy than other monitors, and EIZO's EcoView technology, which controls brightness and switches the monitor off when not in use, they're a fantastic solution for eco-conscious users.

# EIZO COLOREDGE

Designed for environments where accuracy is vital, ColorEdge displays are ideal for use in creative industries.

[EXPLORE THE COLOREDGE RANGE HERE](#)

Combining innovative integral calibration sensors that measure white balance, colour temperature and tone, with application specific integrated circuits and 4K technology, ColorEdge screens guarantee true colours.

Picture quality can also be configured across monitors, so everyone sees the same image

– aiding collaborative working – especially if numerous teams are involved in the same projects. Perfect for creative workspaces, such as photographic studios, graphic design agencies, printers and publishers, your customers will know their on-screen images look exactly as they will in print each and every time.

# EIZO RADIFORCE

Created for application in medical settings, EIZO's RadiForce displays will give an accurate picture of the situation so your customers can deliver the very best care.

[EXPLORE THE RADIFORCE RANGE HERE](#)

When delivering a diagnosis, it needs to be as accurate as possible, to help patients process the situation and to help healthcare professionals advise on the best course of action.

EIZO's RadiForce range helps them to see fractional differences in tissue density and fine details to get an accurate picture.

EIZO RadiForce medical displays are ideally placed to help with that, whether they're being used in surgical, radiology or dental environments – and more. Even the monochrome models feature more than 16,000 shades to give the clearest possible picture. Plus with image stability throughout the life of the screen, picture quality will remain stable years down the line.
