TECHNICAL SOLUTIONS

With almost every device in a meeting room – projector, display, screen, conferencing, audio, blinds and so on – capable of wireless operation, it's unsurprising that wireless can also have a role to play in the control of the environment. Imagine being able to approach the control panel – mounted either on a wall or desk – and, by passing your ID badge in front of it, have it authenticate you as a permitted user of the system. Having recognised you, the panel may even know automatically how you want the room set up, personalising your experience. That's NFC in action: a tag embedded in your badge, and a reader embedded in the control panel provide absolute simplicity – with security. No ID badge? The chances are, your phone is NFC-enabled: if it's been registered with the system, it will work just as well.

DID YOU KNOW?

IT WILL BE WORLD WI-FI DAY ON JUNE 20TH 2017.

THE WORLDWIDE WI-FI MARKET WILL GROW FROM $14.8 BILLION IN 2015 TO $33.6 BILLION IN 2020.
