EDUCATION

This September, Phillips voice recorders and professional dictation devices will be available from Midwich, expanding an already very impressive commercial audio portfolio of products and solutions expertise.

Digital audio and voice recorders are essential tools for students and professionals in the education, healthcare and legal markets. Also suitable for many other industry specialists such as journalists, architects, veterinarians, estate agents, and finance and insurance professionals who require seamless speech-to-text solutions, including professional devices, software, and services.

EDUCATION

Philips professional voice and audio recorders are tailor-made for education. Their digital devices offer best-in-class audio quality in any recording situation and work seamlessly with educational software and information systems. Whether recording academic lectures or capturing important thoughts and ideas from meetings, interviews and group conversations, Philips solutions help students and professionals improve their productivity by saving time and simplifying workflow.

Superior distance recording

Capture lectures and interview professionally, with outstanding sound quality. The 3Mic Auto Zoom technology suppresses surrounding background noise ensuring that the audio that you need is crystal clear, every time, with a motion sensor automatically selecting the right microphone for each situation.

Intuitively designed for education

The large colour display clearly details the status of your recording, and allows you to use the calendar function for retrieving recordings from previous lectures and meetings. The built-in motion sensor detects recordings even when placed on a desk allowing you continue working, hands-free and with extra-long battery life you can always rely on the DVT6010.

Simple save and capture

The MP3 recording function allows you to capture audio in this widely used file format, play back and share with others virtually anywhere. Thanks to plug and play in windows, macOS and Linux you can quickly access your recordings without installing any additional software. Connect to a computer via USB and store, back up and share files.
