

PRINTSMART COST CONTROL PRINTSMART SECUREPRO

Assisting with security and cost control, both the PrintSmart Cost Control and the PrintSmart SecurePro are designed to integrate seamlessly into your existing IT infrastructure.

PrintSmart Cost Control provides SMBs with print costs, reporting and monitoring of all Brother and third party devices.

PrintSmart SecurePro combines all the benefits of PrintSmart Cost Control, together with advanced security features, such as pull-printing.

Mobile printing:

Mail2Print allows users to send and collect a print job from any mobile device that supports email. Users no longer need to return to their desks to send a print job. Less time is required by IT to support different mobile platforms.

Device management :

Advanced Data Collection allows the administrator to collect print data for connected devices, including which device is being used, IP address, page count, A4/A3 mono or colour and more. This important information allows the administrator to understand exactly what is being printed within the business and the associated costs.

Document management:

ScanDirect allows users to scan directly to their email address, which can be viewed on a PC, tablet or smartphone. Documents are scanned directly to the user's email address, instead of a shared folder, where the document can be viewed by others.

Security:

Pull-printing allows the user to release their print job from any chosen device by entering a PIN code at the control panel, swiping an ID card on an attached reader or NFC area of the device. Any job that does not get 'pulled' is deleted based on a pre-set length of time.

- Authentication required by either PIN code, ID card or both.
- Only the user who sent the print job can collect the document.
- Confidential data will only be viewed by an authenticated user.
- Stops uncollected print jobs (that could include confidential information) from being left next to the printer.
- Reduced wastage through deletion of uncollected print jobs.
- Savings of up to 25% can be made through reduced paper, ink and toner cartridge usage.
- Users can choose which device to collect their print job from.
- Users can save time avoiding print queues, busy or broken devices.
