

Affordable colour and mono printing – from one device

Our LED printers cut costs and make learning more fun in schools and colleges

The challenge

Print is vital for any school or college. But using a mono printer for everyday printing and bringing in an additional device for colour means extra expense, and it could result in a struggle to control the cost of printing. Users can save by replacing separate colour and mono printers with a single device that can offer low cost mono printing with high quality colour.

Benefits

Cost-effective mono print

Use clear, low cost mono printing for letters and teaching notes, at the same cost as on a mono device.

Vibrant colour

Staff can produce leaflets or any other colour material themselves – avoiding the delays and costs of external print services at the same price as on a mono printer.

Colourful, effective teaching aids

Produce bright informative teaching aids to motivate pupils and students, and make even complex topics easier to understand.

Reliability

Unique digital LED technology has fewer moving parts than laser printers, increasing reliability as well as quality. OKI offers a three-year warranty for added reassurance.

The solution

The latest generation of OKI's colour printers can provide the cost-effective solution to all print needs from a single compact, reliable device. They deliver clear, low cost mono printing for letters to parents, internal messaging, lists and teaching notes. They provide colour for visual aids that get attention and support learning.

OKI's printers use digital LED technology and microfine HD toner. It's a unique combination that allows them deliver cost effective mono print, and superior colour that's brighter, sharper and always commands attention. All output simply looks better, setting high quality standards while keeping costs in check.
